Chlorophyll a and b were determined by the method of Arar and Collins (1971). The concentration of chlorophyll a was determined by measuring the absorbance at 663 nm and the concentration of chlorophyll b was determined by measuring the absorbance at 646 nm. The concentration of chlorophyll a and b was expressed in $\mu\text{g mL}^{-1}$ of the extract.

Figure 1 is a line graph showing the relationship between the percentage of total effort and the percentage of total catch for five fish species. The x-axis represents the 'Percentage of total effort' from 0 to 100, and the y-axis represents the 'Percentage of total catch' from 0 to 100. The species are: Yellow perch, Rock bass, White perch, Striped bass, and Rockfish. Yellow perch shows a high catch percentage for low effort, while Rockfish shows a high catch percentage for high effort.

1. The first part of the paper discusses the importance of the role of the state in the development of the economy. It argues that the state should play a leading role in the development of the economy, particularly in the areas of infrastructure, education, and health care. The state should also play a role in the development of the private sector, particularly in the areas of research and development, and in the provision of social services.

1. The first group of people who are interested in the results of the study are the researchers themselves. They want to know if the study was successful in achieving its objectives and if the data collected is reliable and valid. They also want to know if the study has contributed to the existing knowledge in the field and if it has any practical implications.
